Hometown News Team records AFRL interviews

WRIGHT-PATTERSON AFB, Ohio – Cameras and lights were noticed lab wide the week of August 6 as the Army and Air Force Hometown News Service team invaded the Air Force Research Laboratory, Wright-Patterson Air Force Base sites. Videos of military and civilian personnel were shot and interviews will be sent to hometown television stations to be used during their news broadcast. Pictured above Materials and Manufacturing Directorate's (ML) Steven Patton makes adjustments to an experimental apparatus in the Microelectromechanical Systems Tribology Laboratory, while Hometown News Staff Army SGT Chris Seaton and Air Force SSgt. Jeramie Brown capture the action on video tape. Below Brown films Amy Peppard (center) and Heather Argadine as they examine friction measurements on a Cameron Plint machine in ML's Fluids and Lubes laboratory. The Hometown News team shot nearly 80 videos throughout the five labs and AFRL Headquarters. @ (Air Force photos by Vicki Stein)
